The story in four readings

A complete spoiler synopsis, with the original square syllable signs, Roman transliteration, a literal English gloss, and natural English.

HOW TO READ THE PARALLEL PAGES

Read each row across. The literal column keeps the native word order and exposes relationship, count, scope and tense. The natural English column supplies ordinary English phrasing and the known characters' genders.

The project name here is Naleya. The script and grammar are those of the current Nalesha working reference, version 0.13. Every native word uses its existing 50 syllable signs; no borrowed Unicode alphabet is substituted.

NARRATIVE TIME

The awakening and present danger use bare ongoing predicates. Revealed backstory takes -pa. -pu marks the expected future; a time phrase or condition anchors events beyond the immediate next moment.

An order quoted from the past is spoken in its own present. Saying a character believed something does not make that belief true.

THE GLOSS IS INTENTIONALLY LITERAL

Third one = ni na: one third-person referent, without gender or a claimed personal bond. This person = wa mali: the protagonist as the established narrative focus. A local object pronoun can instead refer to the component or other just-named object.

ASSOCIATION = ki; FROM = po; THAT = wele; PURPOSE = lashi; MANNER = chela. Capitalization highlights grammar words. PAST and FUTURE show endings attached to their predicate, never separate words.

The captain's daughter is literally commander FROM woman. Their child is a person FROM both of them. Joining a person establishes the committed mate relationship; it does not mean merely spending time together.

Our Planet preserves the shipbuilders' proper name, ko lu ki wena. Tewa is Earth. Eshapani is a proposed native rendering of the name Spanish. New story words and transparent compounds are listed at the end.

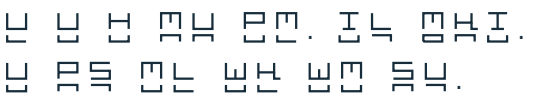

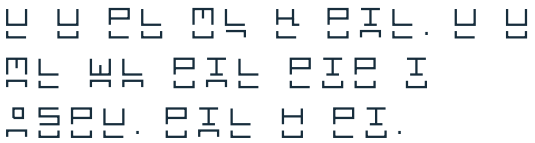

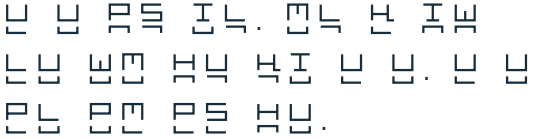

Numbers remain base eight. The century threshold is 144 octal = 100 Earth decimal; the expected remaining voyage is 36 octal = 30 Earth decimal. Tewa ki tanu explicitly means Earth years, so no duration is assigned to a native year. Multiple naki is rendered approximately as billions.

AN OPEN ENDING

The synopsis reports the captain's decision and the records' account of Earth's devastation. It does not prove that every human died, confirm arrival, or decide whether the crew's people will offer refuge.

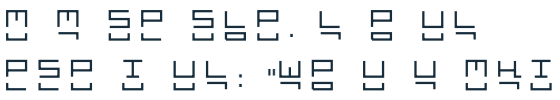

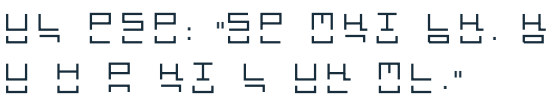

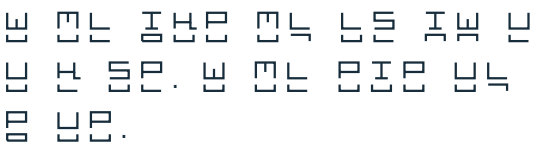

Story / parallel text

Third one think THAT transit NEED-FUTURE three eight six Tewa ASSOCIATION years.	The crew's homeworld is his only reachable refuge. He expects the voyage to take thirty Earth years.
21 V / What remains / Stasis or death			
	She wa mali wama talo, ni na telapu pami shuwo. Wa mali nu toka tala nali lashi tale. Tala pe moketa.	IF this person STILL awake, third one die-FUTURE BEFORE arrival. This person NEED enter stasis AGAIN PURPOSE alive. Stasis CAN fail.	If he stays awake, he will die before arrival. To survive, he must risk stasis again. Stasis can fail.
22 V / What remains / An unanswered future			
	Pumi shuwi ni na talepu ka? She ni na shuwo, po shapi tewepu ni na ka?	AFTER transit third one alive-FUTURE QUESTION? IF third one arrive, outside people protect-FUTURE third one QUESTION?	Will he survive the voyage? If he arrives, will the people he once called the enemy protect him?

Story vocabulary / new roots

These eleven roots are introduced for this synopsis. They are disclosed additions to the working vocabulary, not changes already made to the two existing PDFs.

tapo — **awaken**

Become awake; talo remains the state of wakefulness.

mene — **remember**

Recall earlier events or information; distinct from pisha, know.

pateli — **writing; written signs**

Writing or a written inscription. Pema is the physical display.

chenu — **try; attempt**

Chenu + bare task. A past attempt does not assert task success.

shalo — **war; wage war**

Armed conflict between groups. It does not assert moral evil.

lamu — **pregnant; gestating**

A biological state. Pronouns and agreement remain genderless.

mepe — **hide; conceal**

Make an object unavailable to ordinary observation or discovery.

pame — **restrain; hold back**

Restrict a person or thing from moving; not necessarily injure.

pome — **unintentional; accidental**

Pome chela marks an unintended action or outcome.

tasho — **assigned task; directive**

The task assigned by an authority. Nu still supplies all must / need / should meanings.

tela — **die**

Become no longer alive. Tale is alive; woteshi is death as a noun.

Names, compounds and interpretation

Existing words combine transparently; compounds do not require extra syllable signs.

Eshapani

Spanish

Proposed proper-name adaptation, e-sha-PA-ni. It identifies Spanish rather than claiming that all of Earth speaks one language.

wesha kama

S-drive / fold engine

Short form of nawi wesha kama, space-fold engine. The engine can be used with conventional propulsion.

chalu kama

H-drive / ride engine

The established ride metaphor. It works efficiently through the S-fold and is useless alone.

kalo kama

thrust engine / conventional propulsion

A transparent descriptive compound for the non-H propulsion used with the S-drive.

showa makiwa pama

astrometrics / star-coordinate room

A descriptive room name, not an imported Earth word.

pishi chena

report signals / logs

Recorded reports in the ship context. The compound alone does not assert that every report is true.

tewe lina

protection system / defenses

The system that protects the ship can be dangerous to the protagonist. Protection does not mean moral goodness.

kuta mapeshu

killing tool / weapon

The ship itself is the instrument of mass killing.

malu shapi ki malipo

the crew's outsider / traitor

An outsider associated with the ship tribe. Betrayal follows from broken belonging in this context, not a separate gender or evil marker.
