The ship language

A working language for Gone, with 50 original syllable signs, a fixed grammar, 274 dictionary entries and compounds, names and console text.

Working name: Nalesha (na-LE-sha). The language is native to the ship's builders. The protagonist speaks Spanish; the physical displays remain in Nalesha while he perceives their writing becoming Spanish. Whether this is perception, technology or an unreliable mind remains a story decision.

Sound inventory

Vowels: a, e, i, o, u. Keep them clear and stable, approximately as in Spanish. They do not become English-style diphthongs. Adjacent vowel syllables remain distinct.

Consonant categories: p, t, k, m, n, l, w, sh, ch. P covers a single lip-stop family with p-like and b-like realizations; they never distinguish words. Sh is the sustained hushing sound, as in Argentine yo for speakers who use sh. Ch is the stop-plus-hush sound in chair. Sh and ch are each one consonant despite their two-letter romanizations.

Syllables: V or CV, giving (9 + 1) x 5 = **50 signs**. No independent r, h, v, English y, or separate s occurs. There are no consonant clusters or final consonants. The old network favored a smaller standard inventory; its exact sound losses are setting-specific. Every native word in this reference uses these signs.

Rhythm and melody

The penultimate syllable has a gentle prominence: NA-wa, TA-la, na-LE-sha. Full vowels remain audible on unstressed syllables. Each word has a small rise toward its prominent syllable and a release afterward; a phrase can carry a broader rise and fall. This is a performance guide, not a claim about a specific Earth language.

Pitch does not distinguish dictionary words, tense or gender. Emotional speech and regional accents can use different melodies. An alarm voice stretches important words and repeats complete clauses rather than relying on a musical interval to carry essential meaning.

Organic history

The oldest roots refer to bodies, shelter, water and movement. Long-distance voice networks spread an administrative pronunciation. Printing fixes the component system; centuries of segmented displays favor broad square strokes. The current ship register is regular, but people still have accents, idioms and names that outlive their original meanings.

The 50 syllable signs

Read left to right. One cell is one pronounced syllable. Consonant structure occupies the upper band; vowel structure occupies the lower band.

Onset	a	e	i	o	u
vowel only	 a	 e	 i	 o	 u
p	 pa	 pe	 pi	 po	 pu
t	 ta	 te	 ti	 to	 tu
k	 ka	 ke	 ki	 ko	 ku
m	 ma	 me	 mi	 mo	 mu
n	 na	 ne	 ni	 no	 nu
l	 la	 le	 li	 lo	 lu
w	 wa	 we	 wi	 wo	 wu
sh	 sha	 she	 shi	 sho	 shu
ch	 cha	 che	 chi	 cho	 chu

The small upper carrier on a vowel-only sign has no consonant sound. No dot, rotation or case change alters pronunciation. Character cells have equal width; a wider gap separates words. Stroke components are systematic, but the glyphs are original designs rather than substitutions from an Earth script.

Numbers use these same phonetic signs, not Earth Arabic digits. A boxed group marks a reference or equipment identifier; it is read digit by digit. Numerals are never implied by a missing symbol. Punctuation occupies the gaps between words.

Grammar

Tense is part of the predicate word. The present is unmarked; an unmarked action is ongoing unless context says otherwise.

The clause

Subject + [negation] + finite predicate + [object or task]. Attach **-pa** for past or **-pu** for future. Present predicates have no ending. Suffixes stay on their predicate regardless of the position of a time phrase. Verbs do not agree with gender, count or rank.

No articles correspond to a, an or the. A bare noun can identify a known thing, introduce a thing or name a category. **Malu lokemi** = the ship is damaged. Wa and che distinguish this from that; na asserts exactly one. A noun or state can be a predicate without a separate be-verb.

One necessity construction

Nu covers need, must, should and have to. **Ko na nu tani** = I need water. **Wusho na nu peshu kama** = you need / should / must repair the engine. The operator is the finite predicate: **nupa** needed; **nupu** am going to need. Its task verb stays bare.

Negation scope stays explicit: **cha nu** = no necessity; **nu cha** = necessity not to act. **Wupo na nu cha toka** prohibits entry. Likewise **cha pe kuta** = cannot kill; **cha pepa kuta** = was unable to kill. Pe marks ability, not an inherently moral judgment.

Assistance and tasks

Chali + beneficiary + bare task expresses helping someone act. **Wusho na nu chali ko na peshu ni na** = you have to help me fix it. One finite predicate governs this task chain. An independently asserted clause carries its own tense.

Questions and repeated referents

Nisho na neli = that close person is an operator. **Wupo na pila pema ka?** = do you see the display? **Wusho na pila ke?** = what do you see? Ka ends a yes/no question; a question word occupies the unknown item's place.

Pronouns keep the same form as subject, object or association anchor. Self-directed action repeats the pronoun: **Ko na tewo ko na** = I am treating myself. A repeated topic may be omitted when established; the predicate retains its own tense ending. Technical reports repeat referents when ambiguity matters.

Time on the predicate

The three defaults are ongoing now, ended before now, and going to happen very soon. There is no gerund or separate progressive conjugation.

peshu

am repairing
Present, no suffix; current repair activity.

peshupa

did repair / repaired
The repair activity ended. This alone does not guarantee success.

peshupu

am going to repair
Expected very soon unless an explicit time expression moves it.

Past: ended, at any distance

An ended event takes -pa whether it ended a moment ago or at the beginning of time. **Pami tami** is the previous day, yesterday; **pumi tami** the next day, tomorrow. Time expressions do not replace the ending. Past states locate a condition in the past; context can explicitly say whether it continues.

Pami tami ko na takupa ni na. = Yesterday I hit it. An action that ended can overlap another past event: la supplies while / during without creating a gerund. General truths and habits use bare predicates with context or a repeated-time expression.

Future: expected next

Ko na takupu ni na. = I am going to hit it, imminently. **Pumi tami ko na takupu ni na.** = Tomorrow I am going to hit it. An explicit later time overrides imminence; an explicit condition anchors the consequence to that condition. The future ending works for intention, prediction and impersonal hazards.

State, result and scope

Malu lokemi = the ship is damaged now. **Malu lakemupu** = the ship is going to be destroyed. Tense attaches to the state head just as it attaches to an action. For a nominal predicate, attach it to the noun head; for a location predicate, to to. Objects do not acquire the verb's tense: **kutapa ... malisha** is killed my mate, not killed my former mate.

Pronouns and social address

A personal bond is expressed independently of rank, gender and the number of people involved.

Person stems are **ko** speaker, **wu** addressee, and **ni** third person. Attach **-sho** for a close personal bond or **-po** for a non-close relationship, then write a count. Na means one, mu two, lu multiple with the exact count unspecified. The count is never a gender marker.

	**ko na**	I; speaker, one
	**ko lu**	We; speaker group, multiple
	**wusho na**	You, one; personally close to me
	**wupo na**	You, one; not personally close to me
	**wusho mu**	You two; close to me
	**wupo lu**	You, multiple; not close to me
	**nisho lu**	They, multiple; close to us
	**nipo lu**	They, multiple; outside our bond or group

Bare wu or ni plus a count leaves the relationship unstated; this is useful for an object, an unknown referent or deliberate vagueness. Ordinary personal address selects a relation. The computer consistently uses **wupo** for the addressee and **nipo** for third parties outside its group. In a threat display nipo is interpreted as enemy; elsewhere it can mean visitor, outsider or another crew.

Wupo is not a second-person enemy form. A person can use it while courteous, cautious or openly hostile; the form asserts absence of a personal bond. Shipmates do not automatically use wusho. Rank does not determine the form, but custom normally leaves the first close address to the senior person. Once offered, withholding the close form is an insult.

For romantic partners, changing from close to non-close address withdraws the relationship; it signals a breakup, not merely anger. Temporary conflict can occur while retaining close address. For a familiar third person, the outsider form may imply an enemy, but context can identify a non-hostile outsider explicitly.

Kinship and ship tribes

Social relations and biological origin use transparent constructions; no masculine form stands for a generic person.

Origin in both directions

X po Y = Y comes from X. **X wo Y** = Y is a source of X. Thus **ko na po mali** means my offspring, person from me; **ko na po napa** my daughter, woman from me; and **ko na po namo** my son, man from me. Age is not implied: an adult can remain the person from me.

Ko na wo mali = my parent, person I come from. **Ko na wo namo** = my father; **ko na wo napa** = my mother. Po is also outside: these origin expressions extend the same outward-from-a-boundary sense. Wo supplies its inverse, so parenthood does not need a separate gendered pronoun.

Kinds of bond

-sho is a personal bond: malisho is a close person, conventionally friend in a friendship context. **-pi** narrows the relationship to kin; **-sha** identifies a mate. Namo alone is just a man; namopi a man in the family; namosha a male mate; namopo an outside man. Gender appears only in an explicitly chosen noun such as namo or napa.

Crew is an anchored ship tribe

Ko na ki malu shapi = my ship tribe, my crew.
Wusho na ki malu shapi = your ship tribe.
Nipo lu ki malu shapi = their ship tribe.
Malu shapipo = outsider ship tribe, normally an enemy crew in a hostile encounter.
Shapi is a belonging group: tribe, crew, family or people, depending on its modifiers and context.

An outsider who belonged to us

Malipo means an outside person, with enemy or stranger supplied by context. Explicitly anchoring exclusion to a prior belonging group gives betrayal: **ko lu ki malipo**, our outsider, normally traitor; **ko na ki malipo**, my outsider, a personal betrayer. This possessive construction is understood as a broken bond, not ownership of a stranger.

The hostile environment can explain why these distinctions became habitual: speakers needed to know who shared obligations, supplies and shelter. Current speakers inherit that grammar and its social consequences; they need not discuss survival every time they select a pronoun. Affiliation, exact count and reciprocal obligation remain culturally salient.

Compounds and numbers

Meanings grow through modifier-before-head compounds. Technical context narrows broad everyday roots.

Compounds

The final word is the head: **tala pama** = stasis bay; **nawa lina** = energy system; **sheni pelo** = navigation console. A long engineering phrase can combine established groups: **shasha nawa lina** = reserve power system. Written spaces remain between roots; the script does not fuse them into a new character.

Nawa spans flow, drive and energy through a shared sense of energetic activity. **Kelo** specifically identifies electrical current; **kalo** physical force or thrust. Speakers have precise terms when needed. The broad root does not make those measurements interchangeable.

Counting and ordering

Numbers precede the noun: **mu malu** = two ships. Do not also add lu after a numerical quantity. **Te + number** marks order: **te mu nawa lina** = second power system. This is different from **shasha nawa lina**, reserve power system. A second system can be active; a reserve can have any identifier.

Every native numeral is base eight. The eight digits are **mo na mu shi le chi wi shu**, values 0 through 7. Eight is written 10, not as a ninth digit. Place words are **nala** = 10 octal (8 Earth decimal), **naka** = 100 octal (64), and **nata** = 1000 octal (512). The next places are **we** = 10000 octal (4096), and **chu** = 100000 octal (32768). We and chu are not digits.

Formal cardinal speech names each nonzero place with its multiplier: **na nala mu** = 12 octal (10 Earth decimal); **mu nala le** = 24 octal (20); **na naka chi** = 105 octal (69); **na nata mu naka shi nala le** = 1234 octal (668). Zero-valued places are omitted in cardinals. Boxed identifiers retain all their digits: 105 is read **na mo chi**. A radix tick introduces base-eight fractional digits. Units follow measured quantities.

Commands and relation phrases

Pita nawa lina ta shenu. Set the power system to active.
Cha toka tala pama. Do not enter the stasis bay.
Peshu kama. Repair the engine.
Ko na tokapu ta tala pama. I am going to enter the stasis bay.
Ko na peshu kama to kama pama. I am repairing the engine in the engine bay.

A movement verb can take a place directly or through ta: **toka tala pama** and **toka ta tala pama** both mean enter the stasis bay. To marks location, ta destination/recipient/result, and po outside. Source links use X po Y; their inverse is X wo Y. Pronouns retain explicit counts when present. A repeated topic can be omitted only when already established; technical reports retain it. The tense ending remains on the predicate even when a repeated topic is omitted.

The full day clock

All clocks use the full day. There is no half-day display, AM or PM, or alternate 12-hour or 16-hour convention.

A full day contains **32 local hours in Earth decimal**, which is **40 hours in their octal notation**. Hour labels run **00 through 37**, then return to 00. A duration of one day can therefore be written 40 hours, but 40 is not an hour label on the daily clock.

Each hour contains **100 octal intervals** (64 Earth decimal), and each interval contains **100 octal beats** (64). The format is hour : interval : beat. Interval and beat labels run 00 through 77. These are local units; their duration in Earth seconds is not fixed by this reference.

Start of the full day — **00:00:00**

Eight local hours elapsed — **10:00:00**

Sixteen local hours elapsed — **20:00:00**

Twenty-four local hours elapsed — **30:00:00**

Last beat of the full day — **37:77:77**

Rollover: 37:77:77 is followed by 00:00:00 on the next day. The halfway point, 20:00:00, causes no reset. Daylight and darkness do not create alternative numbering systems. The same clock convention appears on consoles, badges, logs and personal devices.

In prose and dialogue, the protagonist can perceive familiar numerals while the physical display continues to show these native digit signs. Translation must preserve the local quantity and clock convention. Earth-decimal values in this reference are reader explanations, not an alternative numbering system used by the ship.

Translations of relationships

The pronoun relation chosen here is part of the scene. It can change independently of the translated gender or the action.

She is my daughter.

Nisho na ko na po napa.
That close person, one, PRESENT woman from speaker, one.

The predicate explicitly says woman; the pronoun itself contains no gender.

He is my friend.

Nisho na ko na ki malisho.
That close person, one, PRESENT speaker-associated bonded person.

The English he is not preserved as gender. Malisho is friend / my close person in context.

He is her father.

Wa nisho na che nisho na wo namo.
This close person, one, PRESENT man who is the source of that close person, one.

Wa and che distinguish the two referents. Neither pronoun encodes gender; namo explicitly makes the parent male.

You have to help me fix it.

Wusho na nu chali ko na peshu ni na.
Close addressee, one, PRESENT NECESSITY help speaker, one, restore that thing, one.

Wupo na gives the same request with a non-close relationship. Nu also renders should, need and must.

I am in trouble.

Ko na to taka.
Speaker, one, PRESENT in danger / emergency.

A locative predicate expresses the condition; no separate be-verb is needed.

Translations of danger and duty

The pronoun relation chosen here is part of the scene. It can change independently of the translated gender or the action.

You are a traitor!

Wupo na ko lu ki malipo!
Non-close addressee, one, PRESENT our outsider.

The predicate says betrayal by somebody belonging to us. Wupo itself does not mean enemy.

Genocide is wrong.

Shapi makuta loka.
People-as-a-group eradication PRESENT wrong.

Ma + kuta forms eradicate; shapi makuta is conventional group-destruction, rather than an accidental large death toll.

I cannot kill billions of people.

Ko na cha pe kuta lu naki mali.
Speaker, one, PRESENT NOT CAN kill multiple naki of people.

Naki is 10000000000 octal, or 1073741824 Earth decimal. Multiple naki is rendered approximately as billions in English; the native quantity is base eight.

The ship is damaged.

Malu lokemi.
Ship PRESENT damaged.

No article is required. Wa malu identifies this ship if several vessels are in view.

Necessity and ethical inability

Nu stays one operator across water needed to live, a repair demanded by command and advice from a companion. Context supplies urgency. Cha pe is cannot; an ethical refusal can be understood from the surrounding speech, but the form alone does not distinguish moral refusal from practical incapacity. Nu no kuta expresses a prohibition against killing.

Impact, loss and inability

English meaning, native signs, romanization and literal construction.

Something hit the ship.

Po waki takupa malu.
Stranger thing hit-PAST ship.

A completed hit, not a separate past-perfect construction. Po marks outside or unidentified, not necessarily hostile.

Something is hitting the ship.

Po waki taku malu.
Stranger thing hit ship.

The bare action is happening now; context distinguishes sustained contact from repeated impacts.

Something is going to hit the ship.

Po waki takupu malu.
Stranger thing hit-FUTURE ship.

The impact is expected imminently unless a different time is stated.

Impact, loss and inability

English meaning, native signs, romanization and literal construction.

I killed her (my mate).

Ko na kutapa ko na ki malisha.
Speaker one kill-PAST speaker one associated mate-person.

Malisha is genderless mate. Napasha explicitly says female mate if needed. The object relationship is not put into the past.

You killed my daughter.

Wupo na kutapa ko na po napa.
Non-close addressee one kill-PAST woman from speaker one.

Napa explicitly marks woman; the pronoun stays genderless. Wusho can be used if the bond remains close.

I cannot kill him.

Ko na cha pe kuta nisho na.
Speaker one NOT CAN kill close third person one.

Nisho marks a close relationship, not male gender. Use nipo for non-close, or ni to leave relationship unstated.

Judgment, harm and evil

English meaning, native signs, romanization and literal construction.

You are right.

Wusho na nelo.
Close addressee one correct.

Correct about the matter under discussion; no separate present or be marker.

They were right.

Nisho lu nelopa.
Close third persons multiple correct-PAST.

Their judgment was correct in the past. This does not assert that it has since become false.

I was wrong.

Ko na lokapa.
Speaker one wrong-PAST.

The earlier judgment was wrong; present beliefs are supplied by context.

Judgment, harm and evil

English meaning, native signs, romanization and literal construction.

They are evil.

Mashu to nipo lu.
Evil inside non-close third persons multiple.

The locative to means at / in; with an internal quality it is read as inside. Outside affiliation alone does not entail evil.

Breathing smoke is harmful.

Tane tanewa lopi.
Breathe smoke harmful.

A bare action phrase can be a topic; it has no gerund ending. Smoke can cause harm without possessing moral evil.

The enemy is not evil.

Mashu cha to malipo.
Evil NOT inside outsider-person.

Malipo is read as enemy in the established hostile context; it can mean stranger elsewhere.

Open conditions

If this happens, I am going to do that. Use the ordinary bare predicate in the condition and -pu in the future consequence.

She + condition, consequence. She means if. An open future condition has no special subjunctive form: its bare predicate is interpreted under if. The consequence uses the ordinary future ending. Its default time is soon after the condition is met, not necessarily soon after the sentence is spoken.

Schematic: **She X pake, ko na [action]-pu.** = If X happens, I am going to [act]. Square brackets and the analytical hyphen are explanatory notation, not native spelling. The if-clause can also follow its consequence. A generic consequence can remain bare; shome introduces an imagined alternative without changing the ordinary verb endings.

If something happens, I am going to help you.

She po waki pake, ko na chalipu wusho na.
If stranger thing happen, speaker one help-FUTURE close addressee one.

An open condition, not a prediction that the condition will certainly happen.

If it hits the ship, it will be destroyed.

She ni na taku malu, wa ni na lakemupu.
If that thing one hit ship, focal thing one destroyed-FUTURE.

Wa ni na resumes the focused ship; che ni na can distinguish the earlier impactor. Context establishes these referents.

The two interstellar drives

S-drive and H-drive are English reference labels. Their native names describe their functions, using the same script as the rest of the ship.

S-drive: space-fold engine

nawi wesha kama
Nawi = space; wesha = fold; kama = engine. The short engineering form is wesha kama. S creates the fold; S with conventional propulsion can make the journey slowly.

H-drive: ride engine

chalu kama
Chalu = ride or travel carried along a medium; kama = engine. H moves efficiently through the S-fold. H alone is useless because there is no fold to ride.

Travel and story continuity

The earlier voyage estimate is about five years with S and H together, versus about thirty with S and conventional propulsion. These are retained story estimates in ordinary author-facing units, not newly defined native clock or calendar measurements. The protagonist sabotaged H during the voyage; the critical S component was later removed.

Console labels

S-drive / fold engine

H-drive / ride engine

S-drive is damaged

H-drive is inactive

Affirmation and reference

Cha supplies negation and denial. Cho is the existing affirmative. Pronouns can replace nouns in either subject or object position.

Affirmation and negation

Cho affirms a proposition. **Cha** denies it and negates the following predicate or operator. Keep polarity clear in replies to negative questions: affirm or deny the whole proposition, then repeat the short clause when useful. These words carry no gender, number or tense.

Affirmative / that proposition holds

Negative / that proposition does not hold

I cannot kill that close person

No necessity / need not

Need not to act / must not

The same pronoun as subject or object

Ni na is one established third referent: a person or a thing. Relationship-neutral ni is suitable for equipment. **Ko na peshupu ni na** = I am going to repair it. Personal referents can use nisho or nipo to retain the relevant relationship. There is no separate object-case ending.

Context establishes the referent. Where two compete, **wa ni na** resumes the current focused one and **che ni na** the other established one. These are this one and that other one, not gender or grammatical case. Establish the focus before using them; the pronoun alone cannot resolve an unknown referent.

She ni na taku malu, wa ni na lakemupu. = If it hits the ship, it will be destroyed. Here wa ni na refers to the ship brought into focus. Che ni na would distinguish the previously established impactor. Once only one interpretation is live, ordinary ni na is sufficient.

Qualities and manner

A quality precedes a noun it describes. The same quality follows a subject when it is the predicate. Manner is marked explicitly with chela.

Adjectives and predicates

Quality + noun forms a description: **mokemi kimela pelo**, a broken computer terminal; **weli kimela pelo**, a functional terminal. **Noun + quality** makes an assertion: **kimela pelo mokemi**, the terminal is broken. No agreement, gender ending, article or separate be-verb is needed.

Several qualities can precede one head. Li joins equal modifiers: **weli li naweli kimela pelo**, a functional and powered terminal. Compound heads stay together. In **mokemi kimela pelo**, mokemi describes the terminal, while kimela identifies its computational function.

Adverbs: quality + chela

Quality + chela + predicate explicitly marks manner. **Welu mali** = a careful person. **Ko na welu chela peshu ni na** = I am carefully repairing it. Chela stays separate; no special adverb spelling is required. In the past the action is **peshupa**; the manner phrase does not take tense.

Cha before a predicate group negates the whole assertion, including its manner: **cha shuli chela peshu** = not repair quickly, covering either slow repair or no repair. Before an attributive quality, **cha welu mali** means a person who is not careful. To assert an action occurred but lacked care, state the action and the quality separately rather than relying on an ambiguous modifier stack.

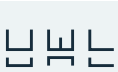

Moral nature is its own domain

Wemi is goodness or benevolent nature; **mashu** is evil or malevolent nature. **Wemi to nisho lu** = goodness is inside them; **mashu to nipo lu** = evil is inside them. The speaker can attribute either nature to an insider or outsider. Neither is a machine status, flavor rating or health assessment.

Shuma describes tasty food; **lopi** harmful exposure; **nelo** a correct judgment; **loka** a wrong judgment or unacceptable act. **Mokemi** is broken and **lokemi** damaged. None is a generic substitute for the moral pair wemi and mashu.

Capability and operating state

A machine can be capable without power, powered but idle, actively working, or defective. A power loss is not automatically a machine failure.

	**weli**	**Functional / capable** Can perform its function when supplied with ordinary prerequisites.
	**naweli**	**Powered / energized** Has usable power. Makes no assertion about a defect or current task.
	**shenu**	**Actively working** Currently performing the relevant task, rather than merely switched on.
	**paleno**	**Idle / standing by** Powered and capable, but no assigned task is currently running.
	**palo**	**Off / disengaged** Switched off or disengaged. Does not assert a defect.
	**penu**	**Ready / available** Capable and with the current prerequisites for use satisfied.
	**mokemi**	**Broken / faulted** A defect prevents proper function despite normal prerequisites.
	**moketa**	**Failing / failed operation** An attempted or required operation fails; state its cause separately.
	**lokemi**	**Damaged** Impaired or physically harmed; it may still be capable of operation.
	**lakemu**	**Destroyed** Ruined beyond usable function in the context, stronger than broken.

Kimela pelo weli. Ni na cha naweli. The terminal is functional; it has no power. Do not call it broken or operationally failed merely because it lacks power. **Ni na paleno** identifies powered standby. **Ni na cha shenu** says only that it is not actively running, not that it is defective.

Entering and joining

The ordinary words for enter and join also describe human intimacy and committed partnership. No separate marriage institution is introduced.

Enter: a person as object

Toka means enter. With a place as object, it is spatial entry; with a person as object in an intimate context, it expresses sex. One person is the grammatical subject and another the object. This is a lexical extension, not a separate sex word or verb conjugation. The grammar does not assign permanent roles by gender.

Ko na toka wusho na. = I am entering you, ongoing in the sexual context.
Ko na tokapa wusho na. = I entered you; the event ended.
Ko na tokapu wusho na. = I am going to enter you, soon unless time is specified.

Join: establish a serious partnership

Pata means connect or join. With two people as participants, it means becoming a couple in a serious relationship. **Ko mu patapa** = we two joined. The count mu makes the pair explicit. A shared plural subject expresses the mutual joining without repeating both names.

Komu, coupling or joined bond, expresses the continuing state: **ko mu komu** = we two are joined partners. **Malisha** is mate-person; **ko na ki malisha** my mate. The action of joining and the continuing bond have distinct expressions.

Joining is understood as commitment, with the relationship practices already described for close address. It does not entail a marriage ceremony, legal marital category or gendered spouse title. Entering someone does not by itself assert that the two people have joined as partners.

Qualities, reference and partnership

English meaning, native signs, romanization and literal construction.

Yes / affirmative.

Cho.
Affirmation.

One syllable; affirms the proposition being discussed.

No / negative.

Cha.
Denial.

One syllable; also negates a following predicate or operator.

The ship is destroyed.

Malu lakemu.
Ship destroyed.

A present state. Malu lakemupu is the ship is going to be destroyed.

I am going to repair it.

Ko na peshupu ni na.
Speaker one repair-FUTURE third referent one.

With the damaged ship or terminal established as topic, ni na resumes it as an object.

Qualities, reference and partnership

English meaning, native signs, romanization and literal construction.

A broken terminal.

Mokemi kimela pelo.
Broken computation console.

Modifier before the noun phrase; no article is required.

A functional terminal.

Weli kimela pelo.
Capable computation console.

This says it can work with its prerequisites; it need not be powered or running now.

The terminal is functional but unpowered.

Kimela pelo weli. Ni na cha naweli.
Computation console capable. Third referent one NOT powered.

Capability remains true without power; absence of power is not a defect.

The terminal is idle.

Kimela pelo paleno.
Computation console idle.

Powered, capable and waiting, rather than actively performing a task.

Qualities, reference and partnership

English meaning, native signs, romanization and literal construction.

The engine is actively working.

Kama shenu.
Engine working.

Current operation; distinct from capability and from merely having power.

The engine is broken.

Kama mokemi.
Engine broken.

A defect, rather than a claim about its moral nature.

The food is tasty.

Mato shuma.
Food tasty.

Flavor has its own quality; wemi moral goodness is not used for it.

They are good by nature.

Wemi to nisho lu.
Goodness inside close third persons multiple.

Wemi is the moral opposite of mashu. Neither follows automatically from affiliation.

Qualities, reference and partnership

English meaning, native signs, romanization and literal construction.

I am carefully repairing it.

Ko na welu chela peshu ni na.
Speaker one careful MANNER repair third referent one.

The same root can describe a person or an action; chela makes manner explicit.

We two joined as partners.

Ko mu patapa.
Speaker group two join-PAST.

The completed joining establishes a serious relationship; no marriage institution is implied.

We two are joined partners.

Ko mu komu.
Speaker group two joined-bond.

A present relationship state, distinct from the act of joining.

I entered you (sexual context).

Ko na tokapa wusho na.
Speaker one enter-PAST close addressee one.

Toka with a person as object is the sexual expression. No separate sex root is introduced.

Joining and sharing a meal

Physical joining and committed partnership use pata. Ordinary companionship has its own construction with wenu, with.

Ko na patapa nisho na. = I joined her.
Nisho na patapa ko na. = She joined me.
Both describe a completed mutual commitment, viewed from different grammatical subjects. Neither sentence marks gender or assigns a higher-status partner.

Wusho na pe pata lu paki. = You can join parts together. With physical components, pata names connection; with people as partners, it names their joining. It does not mean accompany someone to dinner. Use **mate wenu**, eat with; **pali wenu**, sit with; or **shipo wenu**, come with.

Eating together as a social expression

Ko na nalemi chela mate wenu nisho na. = I regularly eat with her. In the appropriate social context, recurring shared meals conventionally suggest that the two people are dating, without the commitment of joining. Shared meals in a family, crew or work routine need not carry that implication.

Ko na mate to mepalu wenu nisho na. = I am eating at the table with her. The location and companion are separate phrases. The dating implication comes from the recurring social relationship, not from the literal meaning of eat, table or with.

Action and commitment stay distinct

Pata can name physical joining without personifying machine parts, and partnership joining without making one partner the owner of another. Mere eating, sitting, coming along or entering someone does not assert that the pair have joined. Once they have joined, komu names their continuing bond.

Rate, direction and rupture

The same quality can describe an object or specify the manner of an action. Tense attaches to the action after any compound has formed.

Shuli is quick or rapid. **Shuli mali waki** is a fast robot; **mali waki shuli chela lowi** says the robot is moving rapidly. Chela marks the quality as modifying the action, rather than the noun. Nalemi chela supplies a habitual or regular frequency.

Outward and inward breaking

break / rupture

break outward / explode

break inward / implode

going to break outward / explode

going to break inward / implode

Po extends outside to an outward direction; bound to extends inside to an inward direction. Mokepo and moketo are conventional rupture compounds: a minor ordinary crack need not be called an explosion. Their directional component stays inside the predicate word, before -pa or -pu.

A repair warning

She wusho na cha shuli chela peshu ni na, ni na mokepopu.
If you do not repair it quickly, it will explode. The same ni na serves first as object and then as subject. Cha negates the entire quick-repair predicate: slow repair can fail the condition just as no repair can. Context supplies the relevant deadline.

A moving robot

Mali waki shuli chela lowi ta ko na ki washano.
The robot is moving rapidly toward my position. Mali modifies waki, making person-thing; it does not assert human membership or moral nature. Ta marks destination, and the association phrase anchors position to the speaker.

Possession and association

Possession uses the existing counted pronouns and ki. No separate my, your, his or her forms are needed.

Possessor + count + ki + possessed head. This is the same structure as **ko lu ki wena**, our planet. Ki covers ownership, affiliation and the relevant association: my position is not a claim to own a point in space. Counts on the possessor describe the possessor, not the number of possessions.

My thing

Your thing: close, singular addressee

Your thing: non-close, singular addressee

Our thing: speaker group

Their thing: close group

Their thing: non-close group

His / her thing: close person

His / her thing: non-close person

Bare **ni na ki waki** leaves a singular possessor relationship unstated; **ni lu ki waki** does the same for multiple possessors. These do not add gender. For multiple addressees, replace na with lu or an exact count while retaining wusho or wupo.

Ko na ki mu waki = my two things. The first na counts the speaker; mu counts the possessions. **Ko mu ki waki** = the thing associated with us two. Association can be shared without requiring a separate possessive pronoun.

Joining, motion and possession

English meaning, native signs, romanization and literal construction.

I joined her.

Ko na patapa nisho na.
Speaker one join-PAST close third person one.

With two people as participants, joining establishes a committed relationship. The pronoun does not encode female gender.

She joined me.

Nisho na patapa ko na.
Close third person one join-PAST speaker one.

The same mutual relationship; the reversed perspective does not establish rank, ownership or a permanent role.

You can join parts together.

Wusho na pe pata lu paki.
Close addressee one CAN join multiple parts.

Physical joining uses the same root. Replace lu with mu to specify exactly two parts.

I am eating with her.

Ko na mate wenu nisho na.
Speaker one eat WITH close third person one.

A shared meal, not the commitment verb pata. Gender remains unspecified.

Joining, motion and possession

English meaning, native signs, romanization and literal construction.

I regularly eat with her.

Ko na nalemi chela mate wenu nisho na.
Speaker one regular MANNER eat WITH close third person one.

In a social context this can imply dating without commitment; family, crew and work contexts can defeat that inference.

I am sitting with her.

Ko na pali wenu nisho na.
Speaker one sit WITH close third person one.

Accompaniment does not itself establish a committed relationship.

I am coming with her.

Ko na shipo wenu nisho na.
Speaker one come-toward WITH close third person one.

Come toward the contextually established destination together.

I am eating at the table with her.

Ko na mate to mepalu wenu nisho na.
Speaker one eat at table WITH close third person one.

To gives location; wenu gives the other participant.

Joining, motion and possession

English meaning, native signs, romanization and literal construction.

If you do not repair it quickly, it will explode.

She wusho na cha shuli chela peshu ni na, ni na mokepopu.
If close addressee one NOT quick MANNER repair it one, it one rupture-outward-FUTURE.

Both ni na expressions resume the same established object. Cha negates the whole quick-repair predicate.

The robot is moving rapidly toward my position.

Mali waki shuli chela lowi ta ko na ki washano.
Person-thing rapid MANNER move toward speaker one associated position.

Mali waki is person-thing. Ta marks the destination; ko na ki washano is my position.

It is going to implode.

Ni na moketopu.
Third referent one rupture-inward-FUTURE.

Moke + to gives moketo; -pu attaches after the entire compound.

My thing.

Ko na ki waki.
Speaker one ASSOCIATION thing.

The possessor count na is singular; it does not assert a count for the possessed thing.

Joining, motion and possession

English meaning, native signs, romanization and literal construction.

Your thing (close).

Wusho na ki waki.
Close addressee one ASSOCIATION thing.

Use wupo for the non-close relationship; plural addressees take lu or an exact count.

Our thing.

Ko lu ki waki.
Speaker group multiple ASSOCIATION thing.

Our is the same counted pronoun plus ki used in ko lu ki wena, our planet.

Their thing (close group).

Nisho lu ki waki.
Close third persons multiple ASSOCIATION thing.

Nipo lu marks non-close possessors; ni lu leaves the relationship unstated.

His / her thing (close person).

Nisho na ki waki.
Close third person one ASSOCIATION thing.

The expression is identical for his and her. Ni na leaves the relationship unstated; nipo na marks non-close.

Statements inside statements

Connectors carry logical relationships. Verbs keep the ordinary bare, -pa and -pu forms.

𐤅𐤋𐤄	**wele**	that / statement content
𐤌𐤅𐤏	**mewa**	who / which / that: noun description
𐤊𐤅𐤌	**kume**	end of an embedded clause
𐤐𐤅𐤌	**poma**	because / actual reason
𐤋𐤔𐤉	**lashi**	so that / intended purpose
𐤔𐤅𐤌	**shome**	suppose / imagined alternative

Statement content and noun descriptions

Ko na pisha wele nisho mu kutapa nipo na. I know those two close people killed that outside person. Wele introduces what is known. **Mu paki mewa ko na peshupa kume weli.** The two components that I repaired are functional. Mewa follows the described noun phrase; that phrase fills one missing subject or object inside the relative clause.

Kume closes an embedded clause when the surrounding sentence resumes. It can be omitted where the clause runs to the utterance end without ambiguity. A connector is fully pronounced; pitch, stress and a pause alone do not carry the distinction. A speech rhythm can remain musical while logical scope is explicit.

In an indirect report, counted pronouns and relationship markers remain anchored to the present speaker. A direct quotation establishes the quoted speaker viewpoint. Names, roles or an explicitly established group resolve competing referents; no gendered pronoun is added.

Certitude and belief

Know, believe and think are ordinary predicates, not conjugations. They describe the speaker position toward a statement.

pisha

know
Asserts knowledge or recognition. The speaker can be mistaken or lying.

wome

believe
Accepts the proposition as true; the conviction may be strong.

meli

think / judge
Offers an assessment or inference, open to revision.

pe wele

it is possible that
Places possibility over a whole statement, rather than an agent ability.

Scope and time

Ko na cha wome wele kama shenu. I do not believe the engine is running.
Ko na wome wele kama cha shenu. I believe the engine is not running.
Negating the belief and believing a negative statement are distinct. Wele keeps their scopes explicit.

The outer predicate takes its own tense: **melipa**, thought; **womepa**, believed; **pishapa**, knew. The content clause independently marks its event or state time. No person, number, gender or uncertainty conjugation is introduced. A bare factual report can omit a certainty preface when none is useful.

Necessity, permission and requests

One necessity word remains sufficient. Ability, permission and requesting an action have separate meanings.

ᓂᐠ	**nu**	need / must / should / have to
ᐯᐠ	**pe**	able / possible
ᐳᓀ ᓀᐠ	**poli**	permitted / allowed
ᒑᐁ ᐁᐠ	**chawi**	request an action

Nu toka lu makiwa. The coordinates must be entered; an impersonal task requirement.
Wupo na nu toka lu makiwa. You must enter the coordinates; the actor is explicit.
Chawi wupo na toka lu makiwa. Please enter the coordinates; request + addressee + bare task.

Ko na poli wape na ka? May I have one? The subject asks whether receiving one is permitted. Na can stand for one of the already established object kind. For authorization of an action, use poli; for capability, use pe. A question under poli does not itself command anyone to perform the task.

Social force follows responsibility

A speaker with authority or an assigned responsibility can direct a task with nu or a bare command. A subordinate can state a genuine safety requirement without claiming higher personal rank. A request leaves the addressee a decision within their obligations. Rank, responsibility, relationship and urgency govern which utterance is appropriate; verbs acquire no honorific or imperative conjugation.

Wusho and wupo continue to express the personal bond independently of this authority. An officer can request something of a close shipmate; a close relationship does not cancel a duty. The computer uses wupo as already established. Urgent procedures can omit an addressee whose identity and count are already clear.

Task order and completion

Pumi means after / later and links ordered steps as then. A requirement, request or permission can govern a whole coordinated task chain.

Toka lu makiwa. Pumi pita kama ta shenu. Pumi laku waleno.
Enter the coordinates. Then engage the engine. Then increase speed.
With data as object, toka means input. Physical destinations use the established location or destination construction. Pita kama ta shenu means set the engine to actively working; laku waleno means increase speed.

Wupo na nu toka lu makiwa li pumi pita kama ta shenu li pumi laku waleno.
You must enter the coordinates, then engage the engine, then increase speed. One nu governs all three coordinated tasks. Li joins them and pumi supplies their order. The following task starts when the preceding step reaches its required endpoint; the engine can keep running after engagement succeeds.

Counts, acknowledgement and completion

Wupo na addresses one non-close person; wupo mu addresses two. This counts the addressees, not how many times to repeat a task. If responsibility differs between people, name the actor for each step. Te na, te mu and te shi can label first, second and third steps using the existing ordinal construction.

Cho can acknowledge and accept the instruction. **Ku** reports that the active task is complete. An acknowledgement does not assert completion. If several tasks are active, repeat the task, equipment identifier or step number. **Cha pe** reports inability; a short state such as **kama mokemi** identifies the obstacle.

Time does not change the task verb

Commands and task complements stay bare; they are not independent assertions of an action happening now. The finite outer predicate carries tense where needed: nupa needed, nupu going to need, polipa was permitted, polipu going to be permitted. A time phrase supplies a scheduled date or time. Pumi tami means tomorrow; pumi between steps means then.

A permission request over time

An invitation can ask about more than one action. The question ending marks the scope of the whole proposal.

Ko na poli shipo wenu wusho na ta shalu mato li pumi toli la shalu ka?
May I come with you for dinner, then stay the night?

May I / am I permitted

come with you, personally close

for dinner, the conventional night meal

and then stay during the night

question over the proposed task chain

Poli scopes over coming for dinner and the later overnight stay. Permission for the first action alone does not settle the second; a reply can name the accepted action and deny another. The close form wusho states a relationship, not entitlement to an invitation or to stay. Wupo is appropriate if the relationship is non-close.

To schedule it for tomorrow, place **pumi tami** before the question or alongside the proposed visit. The speaker asks for permission now; the tasks take place at the specified later time. A permission statement does not assert that the permitted visit happened.

Reasons, purposes and imagined alternatives

Poma asserts a cause. Lashi states a goal. Shome makes an imagined scenario explicit without a subjunctive verb system.

Cause versus purpose

Kama moketapa poma kela shakupa.
The engine failed because the temperature was excessive. Both finite predicates are past.
Ko na kunipa kama lashi nisho mu pe peshu ni na.
I disconnected the engine so those two could repair it. The purpose clause states an intended opportunity, not that the repair was carried out.

An imagined condition and result

Shome ko na cha kunipa kama, ni na shenu nemi.
If I had not disconnected the engine, it would be running now. Shome scopes both clauses as an imagined alternative. The disconnection is placed in the past and the running state at now. There is no added would or had conjugation.

She still introduces an open condition. Shome introduces a supposed scenario; context can establish that it contradicts known facts. The marker does not secretly assert that the supposed scenario actually occurred. A more remote future in either kind of condition is specified by an explicit time phrase.

Before, after and while

Pami, pumi and la can take a time phrase or a whole clause: before, after and while. A past event can be related to another past event without a new perfect or progressive conjugation. Each independently asserted finite predicate keeps its ordinary time marking; the connector states their relationship.

Certainty, permission and sequence

English meaning, native signs, romanization and literal construction.

I think the engine is broken.

Ko na meli wele kama mokemi.
Speaker one THINK THAT engine broken.

Meli is an assessment or inference. The embedded clause has its own ordinary time.

I believe the engine is broken.

Ko na wome wele kama mokemi.
Speaker one BELIEVE THAT engine broken.

Wome accepts the proposition as true; a belief can be strongly held.

I know the engine is broken.

Ko na pisha wele kama mokemi.
Speaker one KNOW THAT engine broken.

The speaker asserts knowledge; the grammar does not certify truth or honesty.

It is possible that the engine is broken.

Pe wele kama mokemi.
POSSIBLE THAT engine broken.

Pe scopes over a whole statement here, rather than expressing an agent ability.

Certainty, permission and sequence

English meaning, native signs, romanization and literal construction.

I do not believe the engine is running.

Ko na cha wome wele kama shenu.
Speaker one NOT BELIEVE THAT engine running.

This withholds belief; it does not assert the opposite proposition.

I believe the engine is not running.

Ko na wome wele kama cha shenu.
Speaker one BELIEVE THAT engine NOT running.

Here the negative proposition is the content of the belief.

I know those two close people killed that outside person.

Ko na pisha wele nisho mu kutapa nipo na.
Speaker one KNOW THAT close third persons two kill-PAST outside third person one.

Count and relationship remain explicit inside the report; gender does not enter the pronouns.

The two components that I repaired are functional.

Mu paki mewa ko na peshupa kume weli.
Two components RELATIVE speaker one repair-PAST END functional.

The component phrase fills the missing repair object. Kume closes the relative clause before the main predicate.

Certainty, permission and sequence

English meaning, native signs, romanization and literal construction.

The engine failed because the temperature was excessive.

Kama moketapa poma kela shakupa.
Engine fail-PAST BECAUSE temperature excessive-PAST.

Poma asserts an actual reason. Each finite predicate takes its own time ending.

I disconnected the engine so those two could repair it.

Ko na kunipa kama lashi nisho mu pe peshu ni na.
Speaker one disconnect-PAST engine PURPOSE close third persons two CAN repair it one.

The purpose clause is a prospective goal; the repair is not asserted to have happened.

If I had not disconnected the engine, it would be running now.

Shome ko na cha kunipa kama, ni na shenu nemi.
IMAGINED speaker one NOT disconnect-PAST engine, it one running now.

Shome scopes both the condition and result as an imagined case. There is no subjunctive conjugation.

The coordinates must be entered.

Nu toka lu makiwa.
NECESSITY input multiple coordinates.

An impersonal requirement; the responsible actor may be supplied by context.

Certainty, permission and sequence

English meaning, native signs, romanization and literal construction.

You must enter the coordinates.

Wupo na nu toka lu makiwa.
Non-close addressee one NECESSITY input multiple coordinates.

Names the actor. Rank, assigned responsibility and urgency govern its force as an order.

Please enter the coordinates.

Chawi wupo na toka lu makiwa.
REQUEST non-close addressee one input multiple coordinates.

Requests the action from this addressee. It does not disguise a permission or ability question as an order.

May I have one?

Ko na poli wape na ka?
Speaker one PERMITTED receive one QUESTION.

Na is one of the object kind already under discussion; the omitted noun is recoverable.

Certainty, permission and sequence

English meaning, native signs, romanization and literal construction.

You are permitted to enter the coordinates.

Wupo na poli toka lu makiwa.
Non-close addressee one PERMITTED input multiple coordinates.

Permission does not assert ability or impose an obligation.

You are able to enter the coordinates.

Wupo na pe toka lu makiwa.
Non-close addressee one CAN input multiple coordinates.

Pe marks capability here. Poli is used for authorization.

Enter the coordinates, then engage the engine, then increase speed.

Toka lu makiwa. Pumi pita kama ta shenu. Pumi laku waleno.
Input multiple coordinates. THEN set engine to working. THEN increase speed.

Bare tasks form an order or procedure in the appropriate context. Pumi orders the steps.

Certainty, permission and sequence

English meaning, native signs, romanization and literal construction.

You must enter the coordinates, then engage the engine, then increase speed.

Wupo na nu toka lu makiwa li pumi pita kama ta shenu li pumi laku waleno.
Non-close addressee one NECESSITY input coordinates AND THEN set engine working AND THEN increase speed.

Nu governs the full coordinated task chain, with the same actor throughout.

May I come with you for dinner, then stay the night?

Ko na poli shipo wenu wusho na ta shalu mato li pumi toli la shalu ka?
Speaker one PERMITTED come WITH close addressee one for night meal AND THEN stay during night QUESTION.

The permission question covers both actions in sequence. Close address is chosen independently of permission.

May I come with you tomorrow for dinner, then stay the night?

Pumi tami ko na poli shipo wenu wusho na ta shalu mato li pumi toli la shalu ka?
Next day speaker one PERMITTED come WITH close addressee one for night meal AND THEN stay during night QUESTION.

Pumi tami sets the date. Pumi between tasks orders them; the question asks for permission now.

Quantifiers and their scope

Counts describe a selected set. Quantifiers say how that set relates to the whole group under discussion.

ma	**ma**	all / the whole stated set
washi	**washi**	each / separately for every member
shomi	**shomi**	some / at least one member
kumi	**kumi**	only / excluding relevant alternatives
mo	**mo**	zero / none of the stated kind

Kumi mu mali tale. Only two people are alive. Mu counts two selected people; kumi excludes additional people satisfying the predicate in the active set. Shomi does not itself mean some but not all: explicitly deny all if that distinction matters. Ma mu mali is both people, using all plus two.

All versus each

Ma mu mali wenu chela lowipa na paki. Both people moved one component together. Wenu chela marks their coordinated action.
Washi mu mali wapepa na chome paki. Each of the two people received a different component. Washi distributes the action; chome makes the objects distinct. Each alone would not logically guarantee that an object was never passed between the participants.

Not all versus none

Cha wele ma shapi mali ko lu ki malipo. Not every crew member is a traitor.
Ma shapi mali cha ko lu ki malipo. No crew member is a traitor.
Cha wele negates a whole statement. In the second sentence, all members satisfy the negative predicate. The established ship crew supplies the set meant by shapi mali.

Mo mali tokapa. No people entered. Zero expresses none without another negation. Kumi immediately precedes the focused phrase, so only the speaker acted and the speaker acted on only two objects have different positions for kumi.

Comparisons, degree and thresholds

Compare an explicit property against a standard. Moral nature, machinery, taste and physical quantities keep their separate vocabularies.

LAKO	**lako**	more / greater
MOLU	**molu**	less / fewer
WOLI	**woli**	equal in the stated property
MOPU	**mopu**	compared with / than
KAMI	**kami**	almost / near but short of the target

A + comparison + property + mopu + B.
Wa chami molu wimeli mopu che chami. This generator has less capacity than that generator. Replace molu with lako for greater or woli for equal capacity. The comparison is an ordinary finite operator: molupa was less; lakopu is going to be greater. Its property stays bare.

A comparative count phrase can be a subject or object: **lako mopu mu paki**, more than two components. Maki names a quantity or count: **ke maki mali tale?** How many people are alive? An identifier is introduced by nami instead.

Enough, too much and almost

Kewi pani lashi ko na pila. Enough light for me to see. Existing pani states adequacy against a goal.
Kama shaku lokemi lashi peshu ni na. The engine is too damaged to repair. Existing shaku marks excessive degree relative to the goal. Specify the repair resources or conditions when they define the threshold.

Kemu kami mo. The stored supply is almost zero. Kami says the target has not been reached at the reference time. It does not assert how fast the amount is changing. Name the material, property and unit when the situation does not already establish them.

Time boundaries and continuation

Ordinary time words define the interval. The predicate keeps the existing bare, -pa or -pu time form.

wama	still / the condition continues	
wumi	already / reached by the reference time	
tame	yet / by the reference time	
temi	until / ending boundary	
nape	since / starting boundary	

Nisho na wama tale. She is still alive.
Kama wumi shenu. The engine is already running.
Kama cha moketapa tame. The engine has not failed yet. This denies a failure event within the active interval, not necessarily throughout the entire machine history.

Nisho na talepa temi pami tami. She was alive until yesterday.
Kama wama shenu nape pami tami. The engine is still running since yesterday.
Toli temi kama shenu. Stay until the engine is running. Temi and nape can introduce a time phrase or a clause.

Reference time and explicit boundaries

The default reference time is now. An explicit date, clock reading or established narrative time can anchor the interval. Wama and wumi precede the predicate; tame follows a negative predicate. They are temporal operators, so they do not need the quality-to-manner linker chela.

Still marks continuation; nali again marks recurrence, and nalemi regular marks a habitual pattern. An until statement bounds its asserted interval; if a following death, shutdown or other state matters, assert it explicitly. These words add no gender, number agreement, perfect conjugation or progressive conjugation.

Tracking several people

Names, roles and stable labels identify people. The pronoun still explicitly carries count and relationship; a label is never a count.

Nami introduces a reference label after the counted pronoun. Establish the label once, for example Talemi nami na, Kapiwa nami mu, Shenali nami shi and Mapelo nami le. These labels are 1, 2, 3 and 4 in the native system. They do not encode gender, rank or closeness.

Two close people

One close person labeled 2

Two outside people, group label 3

The thing of outside person 3

A report involving four identities

Nisho na nami na pishipa ta nisho na nami mu wele nipo na nami shi kutapa nisho na nami le.
Person 1 reported to person 2 that person 3 killed person 4. Here 1, 2 and 4 are close to the present speaker; 3 is outside that bond. Each refers to exactly one person. Ta marks the report recipient and wele introduces its content.

Labels stay attached to their established referents as subject, object or possessor. Changing a relationship marker does not change identity. A two-person group has a count of two regardless of its label. Use ki after the entire labeled possessor phrase. Direct quotations establish their speaker viewpoint; indirect reports retain the current speaker viewpoint.

Written identifiers are boxed and read digit by digit; count words retain their normal place-value reading. In speech, kume can explicitly close a multi-digit identifier when the following words might otherwise be taken as more digits. If two labels are discovered to refer to one person, assert that identity correction explicitly; distinct labels alone do not prove distinct bodies.

Quantity, comparison, time and reference

English meaning, native signs, romanization and literal construction.

Only two people are alive.

Kumi mu mali tale.
ONLY two people alive.

Only excludes additional living people in the established set; mu alone counts a selected pair.

Both people moved one component together.

Ma mu mali wenu chela lowipa na paki.
ALL two people WITH MANNER move-PAST one component.

Wenu chela marks coordinated action together. Ma includes both people; the object count is one.

Each of the two people received a different component.

Washi mu mali wapepa na chome paki.
EACH two people receive-PAST one distinct component.

The action distributes over the pair. Chome makes the received components distinct.

Some crew members are alive.

Shomi shapi mali tale.
SOME group people alive.

At least one member of the contextually established crew is alive; the form does not assert that others are dead.

Quantity, comparison, time and reference

English meaning, native signs, romanization and literal construction.

Not every crew member is a traitor.

Cha wele ma shapi mali ko lu ki malipo.
NOT THAT ALL group people speaker-group associated outsider.

Negation covers the whole all-members claim. It does not claim that nobody betrayed the group.

No crew member is a traitor.

Ma shapi mali cha ko lu ki malipo.
ALL group people NOT speaker-group associated outsider.

Each member is excluded from the traitor predicate; this is stronger than not everyone.

No people entered.

Mo mali tokapa.
ZERO people enter-PAST.

Zero supplies none without a separate negative quantifier. No second cha is added.

This generator has less capacity than that generator.

Wa chami molu wimeli mopu che chami.
This generator LESS capacity COMPARED-WITH that generator.

Capacity is the compared property; the two generators are not identified as the same object.

Quantity, comparison, time and reference

English meaning, native signs, romanization and literal construction.

The generators have equal capacity.

Wa chami woli wimeli mopu che chami.
This generator EQUAL capacity COMPARED-WITH that generator.

Woli compares the stated property, not identity, rank or moral nature.

There is enough light for me to see.

Kewi pani lashi ko na pila.
Light ADEQUATE PURPOSE speaker one see.

Existing pani expresses sufficiency against the stated goal.

The engine is too damaged to repair.

Kama shaku lokemi lashi peshu ni na.
Engine EXCESSIVE damaged FOR-GOAL repair it one.

Existing shaku marks degree beyond the repair threshold; this is not moral badness.

The stored supply is almost zero.

Kemu kami mo.
Stored supply ALMOST zero.

The zero threshold has not been reached at the reference time; specify material and units when needed.

Quantity, comparison, time and reference

English meaning, native signs, romanization and literal construction.

More than two components are damaged.

Lako mopu mu paki lokemi.
MORE COMPARED-WITH two components damaged.

The comparative count phrase is the subject; all numbers remain base eight.

How many people are alive?

Ke maki mali tale?
WHAT count people alive?

Ke maki asks for the quantity of the following noun; this is not a request for an identifier.

She is still alive.

Nisho na wama tale.
Close third person one STILL alive.

Wama marks continuation, not a repeated event. The pronoun does not encode female gender.

The engine is already running.

Kama wumi shenu.
Engine ALREADY running.

The running state was reached before or by the reference time and holds there.

Quantity, comparison, time and reference

English meaning, native signs, romanization and literal construction.

The engine has not failed yet.

Kama cha moketapa tame.
Engine NOT fail-PAST YET.

No failure event has occurred by the reference time within the active interval, such as this operating run.

She was alive until yesterday.

Nisho na talepa temi pami tami.
Close third person one alive-PAST UNTIL previous day.

The assertion gives a bounded life-state interval; state any subsequent death explicitly if that information matters.

The engine is still running since yesterday.

Kama wama shenu nape pami tami.
Engine STILL running SINCE previous day.

The condition holds from yesterday to the reference time; no perfect-progressive conjugation is added.

Quantity, comparison, time and reference

English meaning, native signs, romanization and literal construction.

Stay until the engine is running.

Toli temi kama shenu.
Stay UNTIL engine running.

The boundary can be a clause rather than a clock reading.

Two close people.

Nisho mu.
Close third persons TWO.

Mu counts people. It is not a reference label.

One close person labeled 2.

Nisho na nami mu.
Close third person ONE ID two.

Na counts the person; the digit after nami labels that one referent.

Quantity, comparison, time and reference

English meaning, native signs, romanization and literal construction.

The two-person outside group labeled 3.

Nipo mu nami shi.
Outside third persons TWO ID three.

The group count is two; its stable label is 3. Label numbers never imply population size.

Person 1 reported to person 2 that person 3 killed person 4.

Nisho na nami na pishipa ta nisho na nami mu wele nipo na nami shi kutapa nisho na nami le.
Close one ID 1 reported TO close one ID 2 THAT outside one ID 3 killed close one ID 4.

Four identities remain distinct through the embedded statement. These are discourse labels, not gender or rank.

The thing belonging to the outside person labeled 3.

Nipo na nami shi ki waki.
Outside person ONE ID 3 ASSOCIATION thing.

The identifier stays within the possessor phrase before ki; the thing is not counted as three.

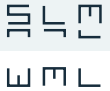

Grammar and pronouns

Lexicon entries 001 to 025. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
001		**ko**	first person	Add count: ko na = I; ko lu = we. No gender marking.
002		**wu**	second person	Wusho = bonded; wupo = non-close. Add a count.
003		**pi**	kin; family relation	Bound suffix on a person word; namopi = male kin.
004		**ni**	third person	Nisho = bonded; nipo = non-close. Add a count.
005		**lu**	plural; several	Unspecified multiple count; ko lu = we, wu lu = you all.
006		**ki**	association; belonging	Possessor + ki + possessed head; counts describe each referent.
007		**pa**	past ending	Predicate ending: event ended before now, at any time distance.
008		**ne**	current; contemporary	An optional lexical time modifier; never a required present-tense particle.
009		**pu**	future ending	Predicate ending: expected very soon unless time is specified.
010		**la**	while; during	Temporal overlap. Bare present actions are already ongoing.
011		**ku**	finished; completed	Finished / completed. As a task reply, reports completion.
012		**cha**	not; denial	Negates the following predicate or operator; also a negative reply.
013		**cho**	affirmation; yes	Affirms the proposition, including a negatively phrased proposition.
014		**ka**	yes or no question	Placed at the end of a polar question.
015		**ke**	what	Appears where the unknown thing belongs.
016		**me**	who	Appears where the unknown person belongs.
017		**to**	at; in; on	Location relation, not the verb activate.
018		**ta**	to; toward	Destination, recipient, result or nominal goal such as a meal.
019		**po**	outside; from; non-close	X po Y = Y from X. On pronouns, marks non-close relation.
020		**li**	and	Joins equivalent phrases or clauses.
021		**lo**	or	Joins alternatives.
022		**she**	if	Open condition: bare predicate after if; -pu in future result.
023		**te**	ordinal marker	Precedes a number: te mu = second.
024		**nu**	need; must; should	Need / must / should / have to; task requirement can be impersonal.
025		**pe**	can; possible	Ability or possibility, not permission by default.

People and the body

Lexicon entries 026 to 050. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
026		**mali**	person; human	A member of their human community, not all living things.
027		**namo**	man; male person	Explicit male noun; an origin expression does not imply age.
028		**napa**	woman; female person	Explicit female noun; an origin expression does not imply age.
029		**nasha**	child	A person before adult status.
030		**mila**	body	An organism's physical body; technical use for a hull body is possible.
031		**nami**	name; designation	Name or stable reference ID; follows a counted pronoun when needed.
032		**malu shapi**	crew; ship tribe	malu shapi; normally anchored: ko na ki malu shapi.
033		**nalu**	commander	Person holding command; not necessarily a military rank.
034		**neli**	operator; specialist	A trained person responsible for a function.
035		**noli**	passenger	A carried person without an operating assignment.
036		**sha**	mate; pair relation	Bound person suffix; namosha = male mate.
037		**shapi**	tribe; belonging group	A family, crew or people as a social collective, by context.
038		**ko na wo mali**	parent; progenitor	ko na wo mali = person I come from.
039		**ko na po mali**	offspring	ko na po mali = person who comes from me.
040		**wachapi**	elder	An older person, sometimes a title of respect.
041		**kuta**	kill	Cause death; a person or a hazard can be the subject.
042		**lami**	head	Body part; not the default term for a leader.
043		**lapi**	hand	Grasping body part; extension to a manipulator is natural.
044		**lani**	eye	Seeing organ; can describe a camera in informal speech.
045		**chelenu**	ear	Hearing organ.
046		**shelumi**	mouth	Speaking or eating opening.
047		**wamolu**	blood	Circulating bodily fluid; distinct from coolant.
048		**melo**	mind; thought	Mental activity or an individual thought, by context.
049		**nima**	voice	A person's audible expression or a synthesized voice.
050		**loma**	foot; supporting limb	The standing or walking support of a body.

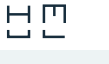

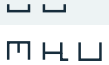

Space and navigation

Lexicon entries 051 to 075. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
051		**malu**	vessel; ship	An inhabited carrier; not restricted to spacecraft.
052		**wena**	world; planet	A planetary world, sometimes its inhabited environment.
053		**showa**	star; sun	A stellar body, including the local sun.
054		**showi**	outer space	The expanse between worlds; not empty volume in a tank.
055		**moshali**	moon	A natural satellite.
056		**shena**	heading; course	Direction selected for travel.
057		**sheni**	navigation	Finding and maintaining a route; also the navigation function.
058		**washano**	position	Where an object is located.
059		**shanu**	destination	The intended endpoint of travel.
060		**shela**	route; path	A traversable way, physical or planned.
061		**sheli**	distance	Separation measured along an agreed reference.
062		**waleno**	speed	Rate of movement; direction is specified separately.
063		**shulu**	direction	An orientation or bearing.
064		**mishela**	map; chart	A spatial representation.
065		**shuna**	orbit	A repeating gravitational route.
066		**washela**	trajectory	A projected or observed movement path.
067		**shuwi**	transit	A passage between locations; does not imply faster than light travel.
068		**shuwo**	arrival	Reaching a destination or an arrival state.
069		**shapo**	departure	Leaving an origin.
070		**shipo**	approach; come toward	Approach a destination or come toward the reference location.
071		**chawu**	port; haven	A place where vessels can shelter and exchange people or goods.
072		**chesha**	beacon	An identifiable source used for guidance.
073		**makiwa**	coordinate	A component of a reference position.
074		**wepata**	vector	A directed magnitude in technical use.
075		**walowa**	horizon; visible limit	The boundary of a view, physical or instrument-defined.

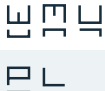

Power and machinery

Lexicon entries 076 to 100. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
076		**nawa**	flow; drive; energy	Shared root for energetic activity; not political authority.
077		**lina**	system; linked assembly	Interacting parts considered as a functional whole.
078		**kama**	engine; drive unit	A machine whose work produces propulsion or movement.
079		**chami**	generator	A device producing usable electrical power.
080		**wakemo**	reactor	A controlled energy-producing reaction chamber.
081		**walu**	battery; energy store	A device retaining energy for later release.
082		**kana**	conduit; channel	A route carrying fluid, energy or a signal.
083		**mikani**	circuit	A completed functional path, particularly electrical.
084		**papelo**	distribution bus	A shared path supplying multiple branches.
085		**komu**	coupling; joined bond	A connection between parts; a continuing partnership between people.
086		**shokala**	valve	A component regulating passage through a conduit.
087		**kali**	pump	A device driving fluid circulation.
088		**kalo**	force; thrust	Physical push; propulsion force in engine contexts.
089		**wetani**	coolant	A working fluid used to carry away heat.
090		**kela**	heat; temperature	Thermal condition; a unit or context specifies the measurement.
091		**pukeli**	pressure	Force per area in technical use; also a pressing condition.
092		**kelo**	electric current	Electrical flow; the technical narrowing of the older flow vocabulary.
093		**meka**	load; demand	The work or draw placed on a system.
094		**wimeli**	capacity	The amount a system can hold or deliver.
095		**kemu**	stock; stored supply	A quantity held for use, including material supplies.
096		**shokemu**	fuel	A consumable source of energy.
097		**kewi**	light; illumination	Emitted or received light, not a light fixture.
098		**kewo**	field	A distributed physical influence in technical contexts.
099		**shoketa**	sensor	A device detecting a physical condition.
100		**chena**	signal	A deliberately distinguishable transmission or indication.

Rooms and equipment

Lexicon entries 101 to 125. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
101		**pali**	seat; sit	A sitting support as noun; sitting as an action predicate.
102		**mepalu**	table; work surface	A raised surface used for work or eating.
103		**pama**	room; bay	A bounded functional space, not necessarily small.
104		**lometa**	deck; floor level	A walkable level of the vessel.
105		**pana**	door; hatch	A closable passage between spaces.
106		**shelani**	corridor	A passage linking rooms.
107		**wopa**	wall	A lateral boundary or partition.
108		**wamenu**	ceiling	The overhead boundary of an occupied space.
109		**pela**	bed; berth	A support intended for resting or sleeping.
110		**taleki**	pod; capsule	A small enclosure for a person or payload.
111		**pelo**	console	A station for observing and directing equipment.
112		**pelu**	panel	A surface grouping controls, access points or indicators.
113		**pema**	display	A surface presenting visual information.
114		**pemi**	key; control	An individual input device, physical or projected.
115		**lapita**	handle; grip	A part intended to be held or operated by hand.
116		**keweni**	lamp	A device providing illumination.
117		**shawela**	window; viewport	A transparent opening, not a software window by default.
118		**lopewa**	stairs; steps	A stepped passage between levels.
119		**kotewa**	lift	A platform or cabin carrying loads between levels.
120		**shapewu**	cabinet; locker	An enclosed storage fitting.
121		**pesha**	clothing; suit	A worn covering; modifiers distinguish pressure suits.
122		**peshi**	helmet	A head covering designed for protection.
123		**penasha**	seal; gasket	A fitted barrier preventing unwanted passage.
124		**mapeshu**	tool	A portable implement used to perform work.
125		**chashu**	vent	An opening for controlled gas passage.

Life support and stasis

Lexicon entries 126 to 150. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
126		**tala**	stasis; suspension	A held biological state; not ordinary sleep.
127		**tali**	sleep	Normal biological sleep.
128		**talo**	wakefulness	An awake, responsive state; not necessarily full recovery.
129		**talu**	life support	Maintaining the conditions required for occupants to live.
130		**tana**	air; breath	The breathing medium in everyday use.
131		**tani**	water	Water as a substance, not any fluid.
132		**mato**	food	Material intended for nourishment.
133		**wanu**	waste	Material rejected from a living or working process.
134		**mewela**	medicine	A therapeutic substance or the practice, by context.
135		**lopu**	injury	Physical harm to a body.
136		**lapu**	pain	An unpleasant bodily sensation.
137		**tema**	illness	A harmful biological condition.
138		**shemi**	infection	Invasion or spread of a biological agent.
139		**temo**	clean; sterile	Free of the relevant contamination; a standard fixes the threshold.
140		**shashumu**	contaminated	Containing unwanted material or organisms.
141		**tena**	containment	Holding a substance or organism within controlled bounds.
142		**shoteni**	oxygen	A technical substance name within the breathing-air vocabulary.
143		**teno**	atmosphere	The gas envelope or enclosed gas environment.
144		**mapenu**	gravity	Gravitational attraction or the experienced downward pull.
145		**tewe**	protection; shelter	Keeping a person or thing from harmful exposure.
146		**mitewi**	patient	A person receiving treatment, not the adjective patient.
147		**tewo**	treat; treatment	An intervention intended to improve a biological condition.
148		**tewu**	recovery	Return toward a functioning biological state.
149		**shosha**	organism	A living individual, human or otherwise.
150		**woteshi**	death	The end of an organism's life.

States and actions

Lexicon entries 151 to 175. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
151		**shenu**	actively working; running	Currently performing the relevant task, rather than merely powered.
152		**palo**	off; disengaged	Switched off or disengaged; does not assert a defect.
153		**taka**	emergency; dangerous breach	An urgent loss of safe conditions; bodily danger by context.
154		**shasha**	reserve; held ready	Set aside for use if needed, rather than merely second.
155		**peshu**	repair; restore	Perform repairs or restoration. A past repair attempt need not have succeeded.
156		**moketa**	fail; failure	Attempted or required operation fails; identify its cause separately.
157		**lokemi**	damaged	Physically or functionally impaired.
158		**lome**	intact; sound	Undamaged in the relevant inspection.
159		**penu**	ready; available	Capable with current prerequisites met. Weli alone asserts capability.
160		**pena**	low; scarce	Below the expected operating amount.
161		**pani**	adequate; normal	Within the required or accepted range.
162		**shaku**	high; excessive	Above the accepted operating amount.
163		**palu**	open	A passage or access point is unclosed.
164		**moku**	closed	A passage or access point is shut; not necessarily sealed.
165		**toka**	enter	Enter a place; input data; a person object can express sex.
166		**powe**	exit	Move out of a place.
167		**pata**	connect; join	Join parts or committed partners; never merely accompany a meal.
168		**kuni**	disconnect	Break a working connection.
169		**pasha**	stop; halt	Cease an activity or motion.
170		**pashi**	like; prefer	The experiencer is the ordinary subject; no inverted construction.
171		**pila**	see; read	Interpret visual information; reading is a contextual use.
172		**chelapi**	hear	Receive and interpret sound.
173		**pisha**	know; recognize	Assert knowledge or recognize. A speaker can be mistaken or lying.
174		**pishi**	speak; report	Express information in speech; technical use includes reporting.
175		**pita**	change; set	Alter something, often with ta followed by a target state.

Numbers and time

Lexicon entries 176 to 200. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
176		**mo**	zero	Explicit zero; never represented by an empty space.
177		**na**	one	Cardinal digit 1.
178		**mu**	two	Cardinal digit 2.
179		**shi**	three	Cardinal digit 3.
180		**le**	four	Cardinal digit 4.
181		**chi**	five	Cardinal digit 5.
182		**wi**	six	Cardinal digit 6.
183		**shu**	seven	Cardinal digit 7.
184		**we**	place 10000 in base eight	Value 4096 in Earth decimal; a place word, not a digit.
185		**chu**	place 100000 in base eight	Value 32768 in Earth decimal; a place word, not a digit.
186		**nala**	eight; place 10	Base-eight place value 10; Earth decimal value 8.
187		**naka**	place 100 in base eight	Earth decimal value 64; not decimal one hundred.
188		**nata**	place 1000 in base eight	Earth decimal value 512; not decimal one thousand.
189		**nemi**	now	The current reference time.
190		**pami**	before; earlier	An earlier-time expression; -pa still attaches to a past predicate.
191		**pumi**	after; later	After / later; pumi between tasks means then, after the prior step.
192		**tami**	day; full clock cycle	32 local hours, written 40 in octal. Clocks run 00 through 37.
193		**shali**	daylight; day	The light part of a planetary cycle.
194		**shalu**	darkness; night	The dark part of a planetary cycle.
195		**teli**	hour; watch	One of 32 local hours per day; contains 64 intervals.
196		**tili**	interval	One of 64 intervals per local hour; contains 64 beats.
197		**tiki**	beat	One of 64 beats per interval; not equated to an Earth second.
198		**pala**	beginning	The initial boundary of an event or span.
199		**kalu**	ending	The final boundary of an event or span.
200		**nali**	again; recurrence	An event repeats; not the tense marker for a new occurrence.

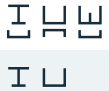

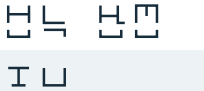

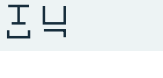

Relationships and expression

Lexicon entries 201 to 208. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
201		**sho**	close; personally bonded	A real trusted bond, not an automatic crew or rank category.
202		**wo**	source of; progenitor	X wo Y = Y is a source of X; inverse of X po Y.
203		**ma**	whole; totality	Whole / all as quantifier; bound ma-kuta still means eradicate.
204		**chali**	help; assist	Chali + beneficiary + bare task; necessity scopes over the task.
205		**loka**	wrong; incorrect	Incorrect judgment or unacceptable act, not a generic equipment rating.
206		**naki**	large base-eight place	10000000000 octal = 1073741824 Earth decimal; 8 to power 10.
207		**wa**	this; nearer referent	Identifies one discourse referent without assigning gender.
208		**che**	that; other referent	Identifies another discourse referent without assigning gender.

Events, judgment and drives

Lexicon entries 209 to 223. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
209		**waki**	thing; entity	A nonspecific entity, distinct from mali person. Po waki is a stranger or unidentified outside thing.
210		**taku**	hit; strike; impact	Taku ongoing; takupa ended impact; takupu imminent expected impact.
211		**nelo**	right; correct	Correctness of a judgment or claim, not a direction or moral purity.
212		**mashu**	evil; malevolent nature	Moral nature, distinct from fault, unpleasant taste or physical harm.
213		**lopi**	harmful; injurious	Causing or tending to cause harm; does not imply malicious intent.
214		**tanewa**	smoke	Airborne products of burning; not the same as ordinary air.
215		**tane**	breathe; inhale	Take a breathing medium into the body. Tane tanewa is breathing smoke.
216		**lakemu**	destroyed; ruined	Beyond usable function in the relevant context, stronger than damaged.
217		**pake**	happen; occur	An event takes place; -pu expresses expected imminent occurrence.
218		**nawi**	space; spatial extent	Space as the medium or extent being folded, distinct from outer space showi.
219		**wesha**	fold; bend over	An ordinary folding root extended to spatial folding in engineering.
220		**chalu**	ride; travel carried	Travel supported or carried along a medium; the technical H-drive metaphor.
221		**nawi wesha kama**	S-drive; space-fold engine	Folds space. Can be used with conventional propulsion, but travel is much slower.
222		**chalu kama**	H-drive; ride engine	Moves efficiently through the S-fold. Useless without that fold.
223		**tanu**	year	A local year; its physical duration relative to an Earth year remains unspecified.

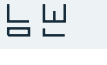

Qualities, operation and joining

Lexicon entries 224 to 234. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
224		**wemi**	good; benevolent nature	The moral opposite of mashu evil; not tasty, healthy or operational.
225		**shuma**	tasty; pleasant in flavor	Sensory taste judgment about food, rather than moral goodness.
226		**weli**	functional; capable	Able to perform its function when supplied with its prerequisites.
227		**mokemi**	broken; faulted	A defect prevents proper function even with normal prerequisites.
228		**paleno**	idle; standing by	Powered and capable, but no assigned task is currently running.
229		**naweli**	powered; energized	Supplied with usable operating power; not a claim about capability.
230		**kimela**	compute; calculation	Processing information; kimela lina computer, kimela pelo terminal.
231		**kimela lina**	computer	A computation system, rather than its physical display alone.
232		**kimela pelo**	computer terminal	A console providing access to computation or the ship network.
233		**chela**	manner linker	Quality + chela before a predicate marks how the action is performed.
234		**welu**	careful; attentive	Attention to relevant conditions; not itself a moral nature.

Accompaniment, motion and rupture

Lexicon entries 235 to 244. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
235		**paki**	part; component	A constituent that can be joined to another part.
236		**mate**	eat	Consume food. Mate wenu someone means eat with that person.
237		**wenu**	with; accompanied by	Shared participation, not possession or partnership by itself.
238		**shuli**	quick; rapid	High rate or short completion time, as specified by context.
239		**lowi**	move; movement	Change position; with an object, move it. Ta marks destination.
240		**nalemi**	regular; habitual	Recurring as a pattern; frequency can modify an action with chela.
241		**moke**	break; rupture	An action of breaking, unlike mokemi which is a broken state.
242		**mokepo**	explode; rupture outward	Moke + po outward. Violent outward rupture or release in context.
243		**moketo**	implode; rupture inward	Moke + to inward. Collapse toward the interior in context.
244		**mali waki**	robot; person-thing	Person + thing, with thing as head; does not itself mean evil.

Clauses, certainty and permission

Lexicon entries 245 to 258. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
245		**wele**	that; statement linker	Introduces the content of knowledge, belief, thought or a report.
246		**mewa**	relative-clause linker	Follows the described noun; that noun fills one missing argument.
247		**kume**	embedded-clause ending	Closes an embedded clause or a delimited spoken identifier.
248		**poma**	because; reason	Introduces the asserted cause, distinct from an intended purpose.
249		**lashi**	so that; intended purpose	Introduces a goal; does not assert that it was achieved.
250		**shome**	suppose; imagined case	Scopes an imagined condition and result; ordinary tense still applies.
251		**wome**	believe; accept as true	A belief or conviction, not necessarily a tentative opinion.
252		**meli**	think; judge; infer	A present assessment or line of reasoning, open to revision.
253		**poli**	permitted; allowed	Permission status of the subject; distinct from ability pe.
254		**chawi**	request; ask to act	Chawi + addressee + bare task. Tense attaches to chawi.
255		**wape**	receive; obtain	Receive an offered object; a permission question can request one.
256		**laku**	increase; raise quantity	Increase a quantity such as speed; not merely set it to high.
257		**toli**	stay; remain	Continue at a location; la shalu specifies during the night.
258		**shalu mato**	dinner; night meal	Conventional meal name using darkness / night plus food.

Quantity, comparison and time

Lexicon entries 259 to 274. Native script, romanization, core meaning and use.

No	Script	Word	Meaning	Use
259		**washi**	each; distributively	Applies the predicate separately to every member of the stated set.
260		**shomi**	some; at least one	Nonempty part of the active set; does not itself exclude all.
261		**kumi**	only; exclusively	Precedes the focused constituent and excludes relevant alternatives.
262		**chome**	different; distinct	Difference in the relevant identity or property, stated by context.
263		**lako**	more; greater	Comparison operator; a property and mopu standard can follow.
264		**molu**	less; fewer	Comparison operator for a quantity, count or degree.
265		**woli**	equal in value	Equality in the stated property; not automatic identity of the objects.
266		**mopu**	compared with; than	Introduces a comparison standard after a degree or property.
267		**kami**	almost; nearly	Near a stated threshold without having reached it at reference time.
268		**wama**	still; continuing	The stated event or condition continues at the reference time.
269		**wumi**	already; attained by now	The event or state has been reached by the reference time.
270		**tame**	yet; by reference time	With a negative predicate, not yet within the stated interval.
271		**temi**	until; ending boundary	Sets the end of the stated interval; can introduce a time or clause.
272		**nape**	since; starting boundary	Sets the start of an interval; can introduce a time or clause.
273		**tale**	alive; living	Life state, independent of wakefulness, stasis or working machinery.
274		**maki**	quantity; count	The number or amount being compared or asked about.

What appears on the ship

The native wording is physically present. Spanish is the protagonist's perceived rendering; its phrasing can be shorter than a literal translation.

 **tala pama**	Stasis bay **SALA DE ESTASIS**
 **tala taleki**	Stasis pod **CÁPSULA DE ESTASIS**
 **te mu nawa lina**	Secondary power system **SISTEMA DE ENERGÍA SECUNDARIO**
 **shasha nawa lina**	Reserve power system **SISTEMA DE ENERGÍA DE RESERVA**
 **shenu**	Actively working **EN FUNCIONAMIENTO**
 **palo**	Off / inactive **INACTIVO**
 **kama**	Engine **MOTOR**
 **sheni pelo**	Navigation console **CONSOLA DE NAVEGACIÓN**
 **talu lina**	Life support system **SISTEMA DE SOPORTE VITAL**
 **taka**	Emergency **EMERGENCIA**
 **nawa pena**	Power is low **ENERGÍA BAJA**
 **kama moketa**	The engine has failed / is failing **FALLO DEL MOTOR**
 **pana palu**	Hatch is open **ESCOTILLA ABIERTA**
 **tena moketa**	Containment is failing **FALLO DE CONTENCIÓN**
 **tala lina palo**	Stasis system is inactive **SISTEMA DE ESTASIS INACTIVO**

World names and origins

Names distinguish a place of origin from its relationship to the speaker. All forms use the existing syllable signs.

The borrowed name for Earth

Tewa (TE-wa) is the name borrowed from Spanish Tierra. It is a recent adaptation to Nalesha sound categories, not the result of centuries of sound change. The resemblance to Tierra is a quiet clue to the protagonist's origin.

Tewa / Earth

tewa

Borrowed proper name; written with the te and wa syllable signs.

Our planet / their homeworld

ko lu ki wena

Speaker-group + association + planet. This ordinary expression also serves as the homeworld's proper name.

Outside / stranger planet

po wena

The conventional relational name for Earth in this setting. Enemy planet is a contextual reading, especially in military reports.

Person from Tewa / Earth

tewa po mali

Tewa + origin relation + person. Origin is explicit; gender and hostility are not.

Person from outside planet

po wena po mali

The first po modifies planet; the second marks origin. Context supplies stranger or enemy, without a separate demonym.

Origin and belonging

Ko na Tewa po mali. = I am a person from Earth. The same origin construction is used for offspring: X po Y means Y comes from X. Add an explicit count before mali when the number of people matters.

Po describes being outside a boundary or group; physical remoteness alone does not assert hostility. Po wena can identify another planet generally, so context establishes Earth as its referent. The homeworld name retains its established referent when quoted by an outsider; its embedded our reflects the naming culture.

Names and the translation effect

Names use the same syllable inventory and spelling. Their meanings are not automatically transparent to contemporary speakers.

People

Talemi ta-LE-mi

Kapiwa ka-PI-wa

Shenali she-NA-li

Mapelo ma-PE-lo

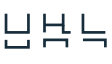

Shawemi sha-WE-mi

Welapa we-LA-pa

Lapeshi la-PE-shi

Nakelu na-KE-lu

Names are not gender-coded by their final vowel. Personal name comes first; a family or house name can follow without a particle. Example full names: **Talemi Pashona**, **Kapiwa Melashu**, **Shenali Towapi**. These surnames are proper names, not new common-word entries. Nalu Talemi means Commander Talemi.

Vessels and places

Pumi Shela - Later Path; a forward-looking vessel name.

Showa Kewi - Starlight; literally star light.

Tewe Malu - Shelter Vessel; a ship named for protection.

Shali Chawu - Daylight Haven; a port or settlement.

How the hallucinated translation behaves

Begin with stable, recurring shapes: the two signs for nawa reappear on different panels. The protagonist recognizes a function before he can explain how. On a later glance, the same display seems to say ENERGÍA. A blink or a shift of attention restores the square characters. The panel itself need not animate or switch languages.

The perceived Spanish is a semantic rendering, not the architecture of Nalesha. It can supply articles, change word order, turn a relationship syllable into a phrase, or choose a Spanish pronoun from what he knows. Several short native words can resolve into one idiomatic label. Names usually remain names; boxed identifiers can appear as Earth digits.

Keep the cause unresolved in the opening. Do not make the language label announce Earth, alien origin or Spanish. Its internal consistency gives the reader evidence of a real writing system before its history is explained.
